

My name is Steven Gago and I have been a professional boxer for 3 years, and prior to that an amateur boxer for 10 years.

I had 27 amateur fights with 20 wins and 7 losses. I've won two Victoria state titles, a Silver Gloves award, Johnny Famechon championships twice, a Lionel Rose championship, and have also have won and have been presented trophies by the legendary Johnny Famechon himself.

As a professional boxer I have had 6 fights for 6 wins including 3 by knock-out.

I have been using the Total Reaction Screen for 9 months now, and I must say this year has probably been the best year of my fighting career. My reaction, speed, and timing have all improved since using the TRS. The reality experienced by using the screen is exactly what you get during a fight. The reaction and response replicates an actual fight.

I have had 2 fights this year after training with the TRS I out boxed both opponents completely. The last fight my reaction time had improved to the point that my opponent had difficulty landing any punches at all. I was able to counter him with harder and faster shots and able to end the fight very quickly. With the TRS, the best thing about this is that you can use it right up until fight night making you sharper and have no risk of any injuries where in sparring, we have to stop a week or 2 before the fight to prevent getting cut or injured before the fight.

As a professional Athlete and not just a boxer, I can see the potential the TRS has in the sporting industry. It makes you focus with the oncoming force through the screen. It helps sharpen your skills, concentration, speed, timing and accuracy.

I believe the TRS is the perfect replication to actual competition in a training situation.

Regards

Steven Gago
